

## **Retrospective 5 (21-9-20)**

## **Group 6**

### 3. Who is the product owner?

Andre Geldenhuis

### 4. How fast are you going?

We've been moving at a good pace but think that we can pick it up in the upcoming weeks, as the end of trimester is approaching and we need to have our rocket ready-to-go quite soon. During the last sprint, some progress was made by a couple of members but we still had quite a few issues to complete towards the end, specifically the software members. Therefore, the hope is that we will get a lot of the essential tasks completed in the next sprint so that we can go into testing and making amendments.

### 5. Proposed work?

The hardware members completed most of their issues within the sprint and the workload was definitely doable despite working through Level 2 COVID restrictions. The software members had quite a few issues in the sprint and found it a little bit too hard to manage especially over the mid-trimester break. As a result, we took out a few issues for the sprint and set them aside to be completed in the next sprint. In the new sprint, we expect the productivity rate to increase significantly, as the COVID restrictions have eased and we will be able to work with each other face-to-face.

### 6. Carry Over

A handful of issues have been carried from the last sprint and into the current sprint.

### 7. Loading

The weights appear to be fair but in general they aren't greatly considered by the group members besides using it to assign issues.

### 10. Estimation

The estimation was okay for this sprint although we had to move some of the issues to the new sprint because they weren't completely finished. In the new sprint, we plan to reduce the number of issues or at least have a handful of issues that don't have a large weight.

### 12. Review

The sprint that has passed was overall okay but there are still many things to work on and implement into the new sprint. Once again, we can improve in this sprint by getting Jolon involved with our work more and showing him our progress during labs, meetings and on the Mattermost channel. More communication with Andre is important and we are hoping to organise a time to speak with him in the near future. Also, in the new sprint we are expecting to see more interaction between the software and hardware members. We have a lot to do in the upcoming weeks as we near the end of trimester therefore we must be productive this sprint and have good time management.
